

# REACH

## REACH Compliance

As you may know, the European REACH regulation 1907/2006 on Registration, Evaluation, Authorisation and restriction of Chemicals (REACH) entered into force on June 1, 2007 and affects all companies producing, importing, using or placing products on the European market. The aim of the REACH regulation is to ensure a high level of protection of human health and the environment from chemical substances, while enhancing competitiveness and innovation.

Articles produced by Black Box Network Services for shipment to countries in the European Union have no intended release of substances, therefore they are REACH compliant products. As may be required in the future, we will document any substances of very high concern (SVHC) as they are adopted by the new European Chemicals Agency (ECHA).
